# Automation Process Concepts

Understanding nodes, items, connections, and the full workflow

# Nodes – for a complete list of Nodes: Confluence Workflows

GE VERNOVA

# Workflow Concepts using n8n, Basic Nodes

GE VERNOVA

### Workflows

- A workflow is a series of connected steps that run automatically
- Can be created inside a Personal Workspace (just you) or a Project Workspace (shared with a team)

### Triggers

- Every workflow starts with a trigger : something that kicks it off
- Examples: a webhook call, a scheduled time, a form submission, or a manual run

### Nodes

- Nodes are the individual steps in your workflow
- Each node performs one action : send an email, call an API, transform data, run an agent

### Integrations (Coming soon!)

- Integrations connect your workflow to external tools and services
- Available now in Amp Workflows: Box and Amp Self Service Agents
- More integrations coming as the platform grows

### Publishing Flows

- A workflow must be Published (activated) to run automatically
- **Everyone has 50 published executions per month**
- Unpublished workflows can still be run manually for testing
- Note: only published executions count against your monthly limit

# n8n Landing Page

GE VERNOVA

1 – Menu –
- **Overview** - brings you to the Landing page (this view)
- **Personal** – brings you to your workflows

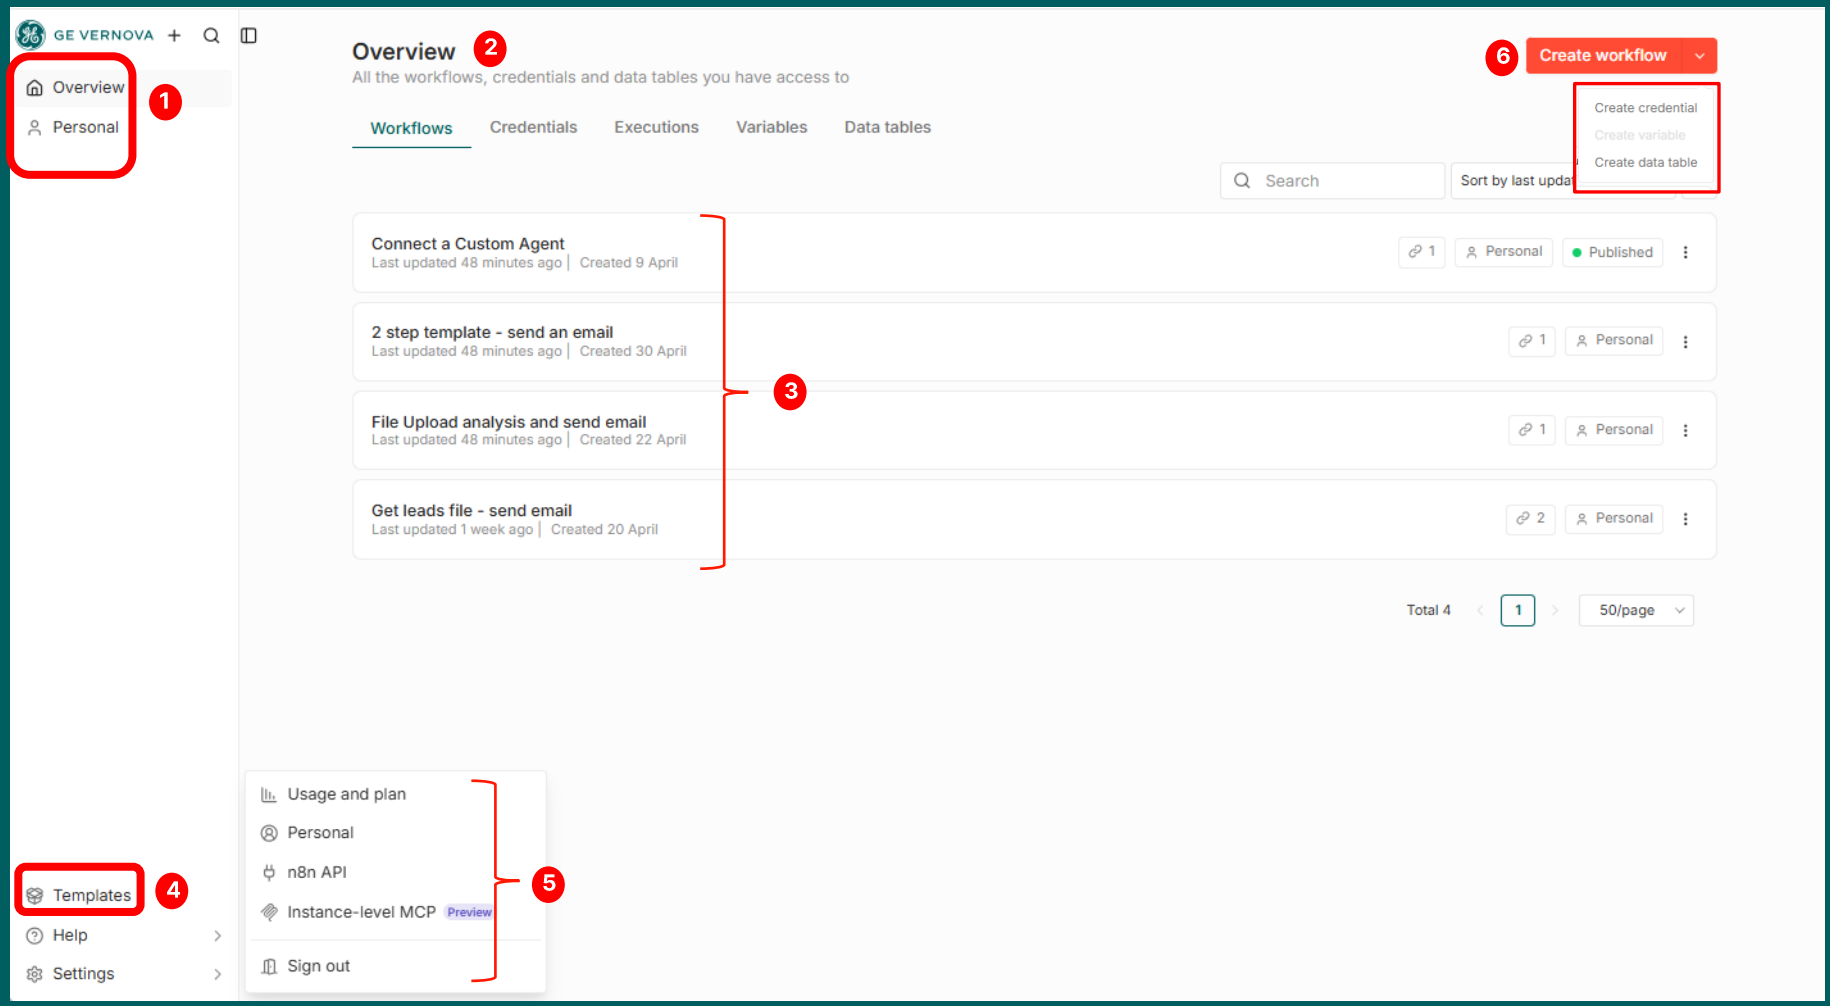

2 – **Personal** Workspace - completely private by default, only you can access your workflows and credentials

3 – A list of your Workflows

4 – **Templates** – will show a list of prebuilt Workflow templates

5 – **Settings**
- Usage and plan
- Personal
- n8n API
- Instance- level MCP
- Sign out

**6 - Create workflow** – click to take you to the Workflow canvas to build a new Workflow

# Governance & Publishing Guidelines

## 📊 Publishing Guidelines

- You currently have **50 published executions** per month
- Manual executions (test runs) do **NOT** count toward your limit
- Only published executions count against your monthly limit
- A workflow must be Published (activated) to run automatically
- Plan accordingly: **test manually, publish intentionally**

## ❖ Process to obtain more Published Executions

- Once completed Workflows Advanced training, you will receive an increased execution limit per month
- (TBD - Process)

## 🚀 Publishing Workflows

1. Open the workflow you want to publish.
2. Confirm it has been tested and configured correctly.
3. Click "Publish" in the upper-right corner of the canvas.
4. Complete any required publishing details.

## 💡 Tips to Stay Within Your Limit

- Use manual runs while building and testing
- Consolidate logic: one efficient workflow beats three redundant ones
- Review your active published workflows periodically
- If you are hitting limits, reach out to the Amp team by creating a Support ticket. Include “Workflow – Reaching Publishing limit” in the ticket name.

# n8n Community Training https://community.n8n.io/

GE VERNOVA

## For more Workflows and n8n training:

The Beginner course covers the basics of n8n:

- Introduction and workflows
- Nodes
- Useful nodes

Beginner-Intermediate:

- APIs and Webhooks
- Data in n8n
- Core workflow concepts
- Error handling
- Debugging
- Collaboration

The Advanced course covers more complex workflows, more technical nodes, and enterprise features:

- Introduction and complex data flows
- Advanced technical nodes
- Pinning and editing output data
- Sub-workflows
- Error workflows
- Building a full example
- Handling files
- Enterprise features
